

Vmware fusion – Unite!

Here comes that guy who carries around a stack  
Of windows software - swears it won't ever run on a MAC  
I said let it go, let it go  
Let me show you now where we're at  
We fuse together applications in virtual machines  
And finally have the choice of usin' the best of breed  
We're switching seam - so seamlessly  
Between MAC and PC

We're running vmware fusion  
Unity is the solution  
See those windows applications in the dock?  
It's no illusion  
If you got the MAC itch...  
It's a pain free switch  
When the operating systems, they unite

There goes that girl who would bet her new black suit  
That to get to windows first ya gotta gotta reboot  
I say let it go, let it go  
Let me show what this will do  
I've got a 64bit, multi-core machine  
That can boot both OSX and Windows XP  
Watch it go, on a MAC book pro  
Yea enjoy the show

and want virtual appliances  
Bundled software in the virtual sense  
And Snapshots rolling back to erase this mess
